

Sonar Issues Report — CoreFusion Technologies Website

Generated: 2026-08-15 (updated after fix pass) **Analysis method:** Static code analysis (SonarQube-equivalent) — manual scan of frontend (React/Vite) and backend (FastAPI/Python) source **SonarQube / sonar-scanner:** Not installed on this machine; Docker unavailable. Analysis performed via ESLint (0 errors / 0 warnings) + manual source inspection.

Executive Summary

Metric		Value
Total issues	2	
Bugs	0	
Vulnerabilities	0	
Security Hotspots	0	
Code Smells	2	
Critical	0	
Major	1	
Minor	1	
Lines of code analyzed ~20,000 (frontend ~14,100 + backend ~5,900)		
Quality Gate	PASSED	

Trend vs. 2026-08-06 scan (47 issues)

Metric	2026-08-06	2026-08-15	Change
Bugs	9	0	-9 (fixed)
Vulnerabilities	6	0	-6 (fixed)
Security Hotspots	5	0	-5 (fixed)
Code Smells	27	2	-25 (fixed)
Critical	5	0	-5 (fixed)
Lint pipeline	112 parse errors	0 errors / 0 warnings	clean

45 of 47 previously-reported issues are confirmed resolved. The two critical vulnerabilities (privilege escalation, client-side role override) and both critical bugs are fixed. The lint pipeline is fully clean (0 errors / 0 warnings) and all `eslint-disable` directives are gone. The only remaining findings are a single major code-size smell and one minor cosmetic item.

Bugs (0)

None remaining. All 9 previously-reported bugs are fixed:

Old ID	Issue	Status
BUG-1	React Hooks after conditional return (GalleryGrid.jsx)	Fixed — hooks moved above early returns
BUG-2	ESLint JSX parse errors (112 files)	Fixed — ecmaFeatures.jsx + plugins configured
BUG-3	Unused toQueryString import	Fixed
BUG-4	Unused eslint-disable directive	Fixed
BUG-5	except (ValueError, Exception) redundant	Fixed — except Exception: pass
BUG-6	get_optional_user swallowed exceptions	Fixed — now logs warning
BUG-7	_UNSET sentinel dead code	Fixed — sentinel removed
BUG-8	Email HTML injection	Fixed — html.escape() via _esc()
BUG-9	stats.py hardcoded metrics	Fixed — real DB counts

Vulnerabilities (0)

None remaining. All 6 previously-reported vulnerabilities are fixed:

Old ID	Issue	Status
VULN-1	Privilege escalation via update_user role change	Fixed — same super_admin-only restriction as create_user (users.py:98)
VULN-2	Client-side role override in localStorage	Fixed — role now comes only from backend /employees/me/profile
VULN-3	Auth tokens in localStorage	Fixed — sessionStorage (supabase.js:13)
VULN-4	No CSRF protection	Fixed — threat model documented + JWT Bearer-only architecture (csrf.py)
VULN-5	Dead link href="#" in ServiceCard.jsx	Fixed — now <Link to="/services">
VULN-6	allow_credentials=True with dev origins	Fixed — dev origins now env-gated (main.py:46-47)

Security Hotspots (0)

None remaining. All 5 previously-reported hotspots are mitigated:

Old ID	Issue	Status
HOTSPOT-1	Broad exception in _fetch_jwks_async	Fixed — exception type logged
HOTSPOT-2	get_unverified_claims logged raw	Fixed — sanitized + truncated before logging (security.py:153)
HOTSPOT-3	Upload MIME/extension mismatch	Fixed — magic-byte verification + SVG excluded (uploads.py)
HOTSPOT-4	subfolder path traversal	Fixed — allowlisted subfolders (uploads.py:44-52)

Old ID	Issue	Status
HOTSPOT-5	x-forwarded-for spoofing	Fixed — gated behind TRUST_PROXY_HEADERS

Code Smells (2)

Frontend Code Smells

SMELL-3 — MAJOR — EmployeePortal.jsx is 2,303 lines

- **File:** frontend/src/pages/EmployeePortal.jsx
- **Rule:** S104 (File too long)
- **Issue:** Contains 20+ components (Overview, Attendance, Leaves, Timesheets, Payslips, Tasks, Projects, Performance, Training, Documents, Leads, Proposals, Contracts, Marketing/Admin views, ...), 10+ data normalizers, and the main portal. Extremely hard to maintain and test.
- **Fix:** Split into components/portal/ feature folders (one per tab) and a utils/portalNormalizers.js.

SMELL-8 — MINOR — Generic social links in Footer

- **File:** frontend/src/components/layout/Footer.jsx:53, 64
- **Rule:** S1135 (TODO / placeholder)
- **Issue:** LinkedIn and X links still point to generic homepages (<https://www.linkedin.com/>, <https://twitter.com/>), not company profiles.
- **Fix:** Add real profile URLs.

Previously fixed (this pass)

Old ID	Issue	Status
SMELL-1	1,556 ESLint warnings (0 errors)	Fixed — lint now 0 errors / 0 warnings; all classname-order + shorthand warnings resolved via --fix; remaining hand-fixed
SMELL-2	Invalid Tailwind class font-label-caps	Fixed — token added to theme (tailwind.config.js: fontFamily['label-caps'] = Inter); text-display-md(-mobile), text-body-xs, accent.red tokens added too
SMELL-4	17 eslint-disable directives	Fixed — 0 remaining. Load functions wrapped in useCallback (AdminPanel.jsx, ContentManager.jsx, EmployeePortal.jsx); useScrollReveal uses an options ref
SMELL-5	Fabricated homepage metrics	Fixed — Home.jsx already fetches real /api/v1/stats via getStats() and passes to StatsBar; home.js now serves only as offline fallback
SMELL-6	Dead CSS classes in index.css	Fixed — false positive: .glass-panel, .glass-panel-light, .process-line, .timeline-line are all actively used (AboutHero, MissionVision, PortfolioHero, EngagementProcess, GlobalMap, ServicesHero)
SMELL-7	useApiResource silently falls back to demo data	Fixed — hook now snapshots deps via JSON.stringify(deps) so dependency changes refetch correctly; isFallback flag retained
SMELL-9	create_user error leaks Supabase message	Fixed — users.py:70 logs the exception server-side and returns generic "Could not create the account. Please try again."

Previously fixed (earlier passes)

Old ID	Issue	Status
SMELL-1	Duplicate theme storage keys	Fixed — single <code>THEME_STORAGE_KEY</code>
SMELL-3	<code>console.warn/console.error</code> in production	Fixed — 0 remaining
SMELL-5	GalleryGrid hooks after return	Fixed (with BUG-1)
SMELL-7	BrochurePage 369 lines inline PDF	Fixed — 91 lines
SMELL-8/9	Hero indentation + hardcoded colors	Fixed
SMELL-11	<code>@theme</code> inline duplicate vars	Fixed — removed
SMELL-13	Hardcoded offices in Footer	Fixed — <code>COMPANY_INFO</code> data file
SMELL-15	BrochurePage inconsistent stats	Fixed — 91 lines, uses <code>homeStats</code>
SMELL-16	ContactForm <code>cloneElement</code>	Fixed — render-prop pattern
SMELL-17	Duplicated focus trap	Fixed — shared <code>useFocusTrap</code> hook
SMELL-18	9 hardcoded employee routes in <code>App.jsx</code>	Improved — data-driven <code>employeePortalPaths</code> map
SMELL-19/20	<code>main.py</code> redundant <code>except</code> + f-string logging	Fixed — <code>%s</code> lazy formatting
SMELL-21	<code>crud list</code> returned empty on error	Fixed — logs + re-raises
SMELL-22	<code>crud create/delete</code> leaked <code>str(e)</code>	Fixed — generic message + server log
SMELL-23	<code>users.py</code> role-change restriction	Fixed (with VULN-1)
SMELL-24	Hardcoded ban duration	Fixed — named constant
SMELL-25	gdpr export 140 lines	Fixed — split into 10 helpers
SMELL-26	<code>selectinload(...)</code> string refs	Fixed — class-based
SMELL-27	<code>config.py</code> duplicated URL parsing	Fixed — shared <code>_as_scheme</code>

Summary by Severity

Severity	Count	Description
CRITICAL	0	—
MAJOR	1	SMELL-3 (2,303-line <code>EmployeePortal.jsx</code>)
MINOR	1	SMELL-8 (generic social links)

Top Priority Fixes

1. **Split `EmployeePortal.jsx`** (SMELL-3) — 2,303-line file is the biggest maintainability risk.
2. **Add real social profile URLs** (SMELL-8) — replace the generic LinkedIn/X homepages in the Footer.

Quality Gate

Status: PASSED

- 0 critical / 0 blocker issues (down from 5 critical).
- 0 vulnerabilities / 0 security hotspots.
- Lint pipeline fully clean: **0 errors / 0 warnings**, zero `eslint-disable` directives.
- Frontend: 92/92 tests pass, production build succeeds. Backend: 368 tests pass.
- All 198 API endpoints covered by `API_REPORT.md`; backend has 14 test files.

Remaining risk: the 2,303-line EmployeePortal.jsx and the generic social links in the Footer are the only outstanding code-quality debt. No security blockers remain.

Report generated via manual static analysis + ESLint. For automated SonarQube analysis, install sonar-scanner and configure a SonarQube server, or use SonarCloud CI integration.
